

PROFESSIONAL SUMMARY

- QA Engineer with 5 years of progressively responsible experience in manual and automation testing in the Customs domain.
- Extensive experience in designing, executing, and maintaining test cases, test plans, and test reports.
- Progressed through Selenium WebDriver, Cypress, and Playwright for automation, with strong expertise in building frameworks from scratch.
- Proficient in CI/CD pipeline design using Bitbucket Pipelines and Jenkins for continuous test execution.
- Hands-on experience in API test automation for REST services using Postman and Playwright APIRequestContext, including end-to-end request lifecycle validation.
- Strong API validation expertise across request methods (GET/POST/PUT/DELETE), status codes, headers, schemas, contract rules, and auth flows (token/session based).
- Experienced in validating both JSON and XML payloads, including negative scenarios, boundary validations, and cross-environment data integrity checks.
- Experience in performance and load testing using Locust.py to validate API scalability, throughput, latency, and stability under concurrent user traffic.
- Leverages Generative AI and AI agents (MCP) to architect and scaffold automation frameworks rapidly.
- Strong DevOps foundation with hands-on Jenkins and AWS (EC2, S3) experience.
- Expertise in SDLC, STLC, and Agile/Scrum methodologies with active participation in all sprint ceremonies.
- Experience in using bug reporting tool JIRA and test management tool TestLink.
- Experience in providing effort estimations, preparing regression suites, and delivering detailed test reports.
- Proven track record of mentoring teams, training new joiners, and driving automation adoption.

TECHNICAL SKILLS

Test Automation	Playwright (Current) Cypress (1 yr) Selenium WebDriver (2 yrs)
API & Performance	Postman, Playwright API Testing (APIRequestContext), REST API Automation (JSON/XML), Locust.py (Load & Performance Testing)
Database	SQL (Basic Knowledge – Query writing, Data validation)
CI/CD & DevOps	Bitbucket Pipelines, Jenkins, AWS (EC2, S3 basics), Git
AI & Automation	Generative AI, AI Agents (MCP), AI-driven framework scaffolding (Cypress & Playwright)
Test Management	JIRA, TestLink, Confluence, Allure Reports
Platforms	Windows, Ubuntu, Android, Kali Linux
Methodologies	Agile/Scrum, BDD, Page Object Model, Data-Driven Testing

PROFESSIONAL EXPERIENCE

WiseTech Global (via E2open acquisition, formerly Blujay Solutions)

QA Engineer | Jun 2021 – Present (5 Years)

Clients: Shell, FedEx, Sunny, etc. | Environments: QA, Stage, Stage2, Demo

Project: Customs Management – Global Customs Compliance Platform

Enterprise customs management platform handling import/export declarations for customs authorities across multiple countries. Processes XML-based submissions for customs approval/rejection across multiple client configurations and country-specific regulatory requirements.

Automation Tool Evolution:

- Selenium WebDriver (2021 – 2023): Maintained and executed existing automation scripts with enhancements and minor updates
- Cypress (2023 – 2024): Built Cypress automation framework from scratch for faster E2E test execution
- Playwright (2024 – Present): Architected modern cross-browser automation framework using AI agents (MCP)

Key Achievements & Responsibilities:

- Performed comprehensive manual testing including functional, regression, integration, and E2E testing across multiple environments (QA, Stage, Stage2, Demo) for global customs management workflows.
- Participated in user story discussions, sprint planning, backlog refinement, and retrospectives as part of Agile/Scrum process, providing accurate effort estimations.
- Designed and executed detailed test cases using TestLink, prepared regression suites for planned releases, and maintained traceability across requirements.
- Identified and logged critical defects in JIRA across multiple sprint cycles with a high valid defect rate, contributing to improved product quality.
- Replicated production incidents in hotfix environments, triaged root causes, and followed through to closure — reducing mean-time-to-resolution (MTTR) significantly.
- Prepared detailed test report documents and quality metrics dashboards in Confluence, enabling data-driven release go/no-go decisions for stakeholders.
- Participated in Defect Triage meetings with all stakeholders, ensuring timely defect prioritization and resolution.
- Maintained and executed existing Selenium WebDriver automation scripts with enhancements, ensuring stable regression test execution during initial tenure.
- Built a Cypress automation framework from scratch using Page Object Model (POM) architecture with reusable components, significantly reducing test maintenance effort.
- Integrated Cypress test suites into Bitbucket Pipelines, enabling automated regression runs on every PR and catching defects pre-merge.
- Optimized Cypress test execution through strategic selector improvements, custom commands, and intelligent wait strategies.
- Architected a modern Playwright cross-browser automation framework using AI agents (MCP) and Generative AI, cutting initial framework setup time from weeks to days.
- Leveraged AI-driven scaffolding to rapidly build end-to-end test suites in Playwright, covering critical business workflows across multiple environments.
- Engineered robust API test automation suite for REST endpoints with JSON/XML payload validation, covering positive/negative scenarios, authentication, schema checks, and downstream integration behavior.
- Implemented reusable API utilities for request building, auth token handling, test data setup/cleanup, and response assertions, improving API suite maintainability and execution speed.
- Built performance and load testing suites using Locust.py for customs management APIs, simulating concurrent users and identifying critical bottlenecks before production release.
- Configured Jenkins CI/CD pipelines for scheduled test execution and Allure report generation, providing real-time quality dashboards to stakeholders.
- Utilized AWS (EC2/S3) for test infrastructure provisioning and artifact storage, ensuring scalable and cost-effective test environments.
- Reduced manual regression effort significantly per release cycle by automating critical E2E test scenarios across all environments.
- Mentored QA engineers on Cypress and Playwright automation, accelerating team automation adoption and improving overall test coverage.
- Provided application training to new joiners, reducing onboarding ramp-up time and ensuring consistent testing practices across the team.
- Involved in status meetings with the onsite coordinator, ensuring clear communication and alignment on testing priorities.

- Verified integration flows with other products and third-party systems, ensuring seamless data exchange.
- Analyzed requirement documents based on system and functional requirement specifications to ensure thorough test coverage.
- Performed smoke testing, sanity testing, system testing, and retesting for each release cycle, ensuring application stability.
- Communicated with developers, QA manager, and project manager to resolve testing issues and defects promptly.

EDUCATION

Bachelor of Technology (B.Tech)

JNTU (Jawaharlal Nehru Technological University) | 2014 – 2018

CERTIFICATIONS & COURSES

- Prompt Engineering
- Claude 101
- Claude Code 101
- Introduction to Claude Cowork
- Claude Code in Action
- AI Fluency: Framework & Foundations
- Building with the Claude API
- Introduction to Model Context Protocol
- Introduction to Agent Skills
- Introduction to Subagents
- AI Capabilities and Limitations
